- Typescript, Javascript, Go, Python, SQL, Node.js, React, Jenkins, Docker, Linux, IAC, Observability, CI/CD, AWS, GCP, Github Actions, Next.js
- AWS: ECS, IAM, CF, Lambda, Step-functions, SQS, SNS, ECR, CodeDeploy, CodeBuild, WAF, TA, EC2, Route-53, EventBridge
- GCP: IAM, Bigtable, Storage, Cloud Run, Cloud Build

EMPLOYMENT HISTORY

Principal Engineer, Nexus.gg

July 2022 - Present

- Designed and built Content-Insights Platform, which ingests thousands of creator videos each day, pulled transcripts and comments, utilized AI to analyze for subject and sentiment, generate time-series metrics, publish notifications and reports
- Completely designed and built v1 creator code APIs. Includes specs, implementation, infra, load-testing, documentation, and launching into production. Creator APIs, now the core business, power creator codes for live titles such as *Bloons TD6*, *Legion TD2*, *Marvel Contest of Champions*, *Dead By Daylight III*, *Sonic Rumble*, and *Angry Birds 2*
- Optimized company growth by utilizing APM dashboards, Grafana k6, and slow-query logs to find inefficient inefficient SQL queries and identified long term improvements in engineering process before our customers were affected by our growth as we onboarded newer and larger
- Performed all engineering related SOC2 audit tasks
- Managed all DevOps and engineering, CI/CD workflows, blue/green deployments

Director Of Engineering, Chrono.gg

Nov 2019 - July 2022

- Oversaw the hiring process of the engineering team including collaborating with the CEO to hire a VP of Engineering. Focus was placed to establish a culture that prioritized inclusiveness, empathy, and a healthy work-life balance
- Managed a team of 5-6 engineers with a focus on mentorship, mental health, happiness, and their overall effectiveness
- Collaborated closely with product and leadership team to set expectations for releases and develop our technical roadmap

Principal Engineer, Chrono.gg

Jan 2016 - Nov 2019

- Founding engineer
- Developed a successful e-commerce platform on AWS utilizing React.js, MongoDB, and Node.js and managed our infrastructure including EBS, CF, S3, IAM, EC2, ELB, ECR, pipelines, and the MongoDB cluster
- Responsible for all engineering efforts, including all new features and bugs for company's initial three years

Software Engineer/DevOps Engineer, Synapse Wireless

Jun 2014 - Jan 2016

- Worked closely with engineering verticals to architect and design the cloud platform infrastructure
- Represented the cloud platform group in our security council
- Re-built and hardened bastion hosts for in-field remote hardware devices with no downtime or interruptions
- Re-architected legacy monolith applications to make them highly available, stateless, and managed via orchestration
- Responsible for working with engineers across all verticals to debug and triage core platform issues

Staff Software Engineer, Emerson Network Power

Jul 2011 - June 2014

Senior Solutions Engineer, ASG

Jan 2006 - Jul 2011

EDUCATION

Bachelor of Science, Computer Science
University of Alabama, Huntsville

2004-2009
